## [Wallpaper group - Wikipedia](#)

Sat, 15 Sep 2018 22:39:00 GMT

Examples A and B have the same wallpaper group; it is called  $p4m$  in the IUC notation and  $*442$  in the orbifold notation. Example C has a different wallpaper group, called  $p4g$  or  $4*2$ . The fact that A and B have the same wallpaper group means that they have the same symmetries, regardless of details of the designs, whereas C has a different set of symmetries despite any superficial similarities.
