upconvolution, or (iii) attempting to resolve the confusion, as in [28], which awkwardly refers to "upconvolution (deconvolution)". As another example, generative models are traditionally models of either the input distribution  $p(x)$  or the joint distribution  $p(x,y)$ .

Machine learning is a field of computer science that uses statistical techniques to give computer systems the ability to "learn" (e.g., progressively improve performance on a specific task) with data, without being explicitly programmed.. The name machine learning was coined in 1959 by Arthur Samuel. Evolved from the study of pattern recognition and computational learning theory in artificial ...
